This Annual Information Form this document is dated March 19, 2012 and, unless specifically stated otherwise, all information disclosed in this form is provided as at December 31, 2011, the end of Cordy's most recently completed fiscal year. In this Annual Information Form ("AIF"), "Corporation" and "Cordy" refer to Cordy Oilfield Services Inc., its predecessors and acquired companies and, unless otherwise expressly indicated, all references to "\$" or "dollars" are to Canadian dollars.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Information Form contains certain forward looking statements and forward looking information (collectively referred to herein as "forward looking statements") within the meaning of applicable Canadian securities laws. All statements other than statements of present or historical fact are forward looking statements. Forward looking information is often, but not always, identified by the use of words such as "could", "should", "can", "anticipate", "expect", "believe", "will", "may", "projected", "sustain", "continues", "strategy", "potential", "projects", "grow", "take advantage", "estimate", "well positioned" or similar words suggesting future outcomes. In particular, this Annual Information Form contains forward looking statements relating to:

1. the future opportunities for the Corporation;
2. the business strategy of the Corporation; and
3. the competitive advantage of the Corporation.

Forward looking information respecting:

4. the business opportunities for the Corporation are based on the views of management of the Corporation and current and anticipated market conditions; and
5. the perceived benefits of the growth strategy and operating strategy of the Corporation are based upon the financial and operating attributes of the Corporation as at the date hereof, as well as the anticipated operating and financial results.

Other forward looking statements regarding the Corporation are located in the documents incorporated by reference in this Annual Information Form and are based on certain key expectations and assumptions of the Corporation concerning anticipated financial performance, business prospects, strategies, commodity prices, sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities and skilled personnel, dependence on major customers, uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed, regional competition, the sufficiency of budgeted capital expenditures in carrying out planned activities, and the ability to obtain financing on acceptable terms, which are subject to change based on market conditions and potential timing delays. Although management of the Corporation consider these assumptions to be reasonable based on information currently available to them, they may prove to be incorrect.

By their very nature, forward looking statements involve inherent risks and uncertainties (both general and specific) and risks that forward looking statements will not be achieved. Undue reliance should not be placed on forward looking statements, as a number of important factors could cause the actual results to differ materially from the beliefs, plans, objectives, expectations and anticipations, estimates and intentions expressed in the forward looking statements, including those set out below and those detailed elsewhere in this Annual Information Form (and in documents incorporated herein by reference):

6. inability of the Corporation to continue to meet the listing requirements of the TSX Venture Exchange;
7. competition for, among other things, capital, materials and customers; and
8. the risk factors set forth under "Risk Factors".

Readers are cautioned that the foregoing list is not exhaustive.

The reader is further cautioned that the preparation of financial statements in accordance with IFRS requires management to make certain judgments and estimates that affect the reported amounts of assets, liabilities, revenues and expenses. These estimates may change, having either a negative or positive effect on net earnings as further information becomes available, and as the economic environment changes.

The information contained in this Annual Information Form, including the documents incorporated by reference herein, identifies additional factors that could affect the operating results and performance of the Corporation. We urge you to carefully consider those factors.

The forward looking statements contained herein are expressly qualified in their entirety by this cautionary statement. The forward looking statements included in this Annual Information Form are made as of the date of this Annual Information Form and the Corporation does not undertake and is not obligated to publicly update such forward looking statements to reflect new information, subsequent events or otherwise unless so required by applicable securities laws.

GLOSSARY

In this Annual Information Form, unless the context otherwise requires, the following words and phrases have the meanings set out below.

“**ABCA**” means the Business Corporations Act (Alberta), including the regulations promulgated thereunder, as amended;

“**Battle River**” means Battle River Oilfield Construction Ltd., a corporation incorporated under the ABCA;

“**Bry-Don**” means Bry-Don Oilfield Contracting Ltd., a corporation incorporated under the ABCA;

“**Calgary Septic**” means Calgary Septic Co. Ltd., a corporation incorporated under the ABCA;

“**company**” unless specifically indicated otherwise, means a corporation, incorporated association or organization, body corporate, partnership, trust, association or other entity other than an individual;

“**Cordy Shares**” or “**Common Shares**” means the common shares in the capital of Cordy, as presently constituted;

“**Corporation**” or “**Cordy**” means Cordy Oilfield Services Inc., a corporation incorporated under the ABCA;

“**Coverall**” means Coverall Pipeline Construction Ltd., a corporation incorporated under the ABCA;

“**CSC**” means CSC Ltd., a corporation incorporated under the ABCA, a wholly-owned subsidiary of Calgary Septic;

“**Exchange**” means the TSX Venture Exchange Inc.;

“**Hartwell**” means Hartwell Oilfield Ltd. (formerly 522532 Alberta Ltd.), a corporation incorporated under the ABCA;

“**Lamont**” means Lamont Bit Services Ltd., a corporation incorporated under the ABCA;

“**Mesken**” means Mesken Contracting Limited, a corporation incorporated under the ABCA;

“**Nohels**” means Nohels Group Inc., a corporation incorporated under the Business Corporations Act (British Columbia);

“**New West**” means New West Pipelines Ltd., a corporation incorporated under the ABCA;

“**person**” means a company or an individual;

“**RB2**” means RB2 Energy Services Inc., a corporation incorporated under the ABCA;

“**Sphere**” means Sphere Drilling Supplies Ltd. (formerly Sphere Drilling Fluids Ltd.), a corporation incorporated under the ABCA;

“**Tawow**” means Tawow Resources Inc., a corporation incorporated under the ABCA;

“**Top-Notch**” means Top-Notch Oilfield Services Ltd., a corporation incorporated under the ABCA

“**U.S.**” means the United States of America.

CORPORATE STRUCTURE

The Corporation was incorporated on April 30, 1998 pursuant to the provisions of the ABCA as "783223 Alberta Ltd." By a Certificate of Amendment issued on October 9, 1998, the Corporation changed its name to "QCC Technologies Inc.". By a Certificate of Amendment issued on September 21, 2005, the Corporation changed its name to "Cordy Oilfield Services Inc."

The head office of the Corporation is located at 1000, 1520 - 4th Street S.W., Calgary, Alberta, T2R 1H5. The registered office of the Corporation is located at 1000, 250 - 2nd Street S.W., Calgary, Alberta, T2P 0C1.

INTERCORPORATE RELATIONSHIPS

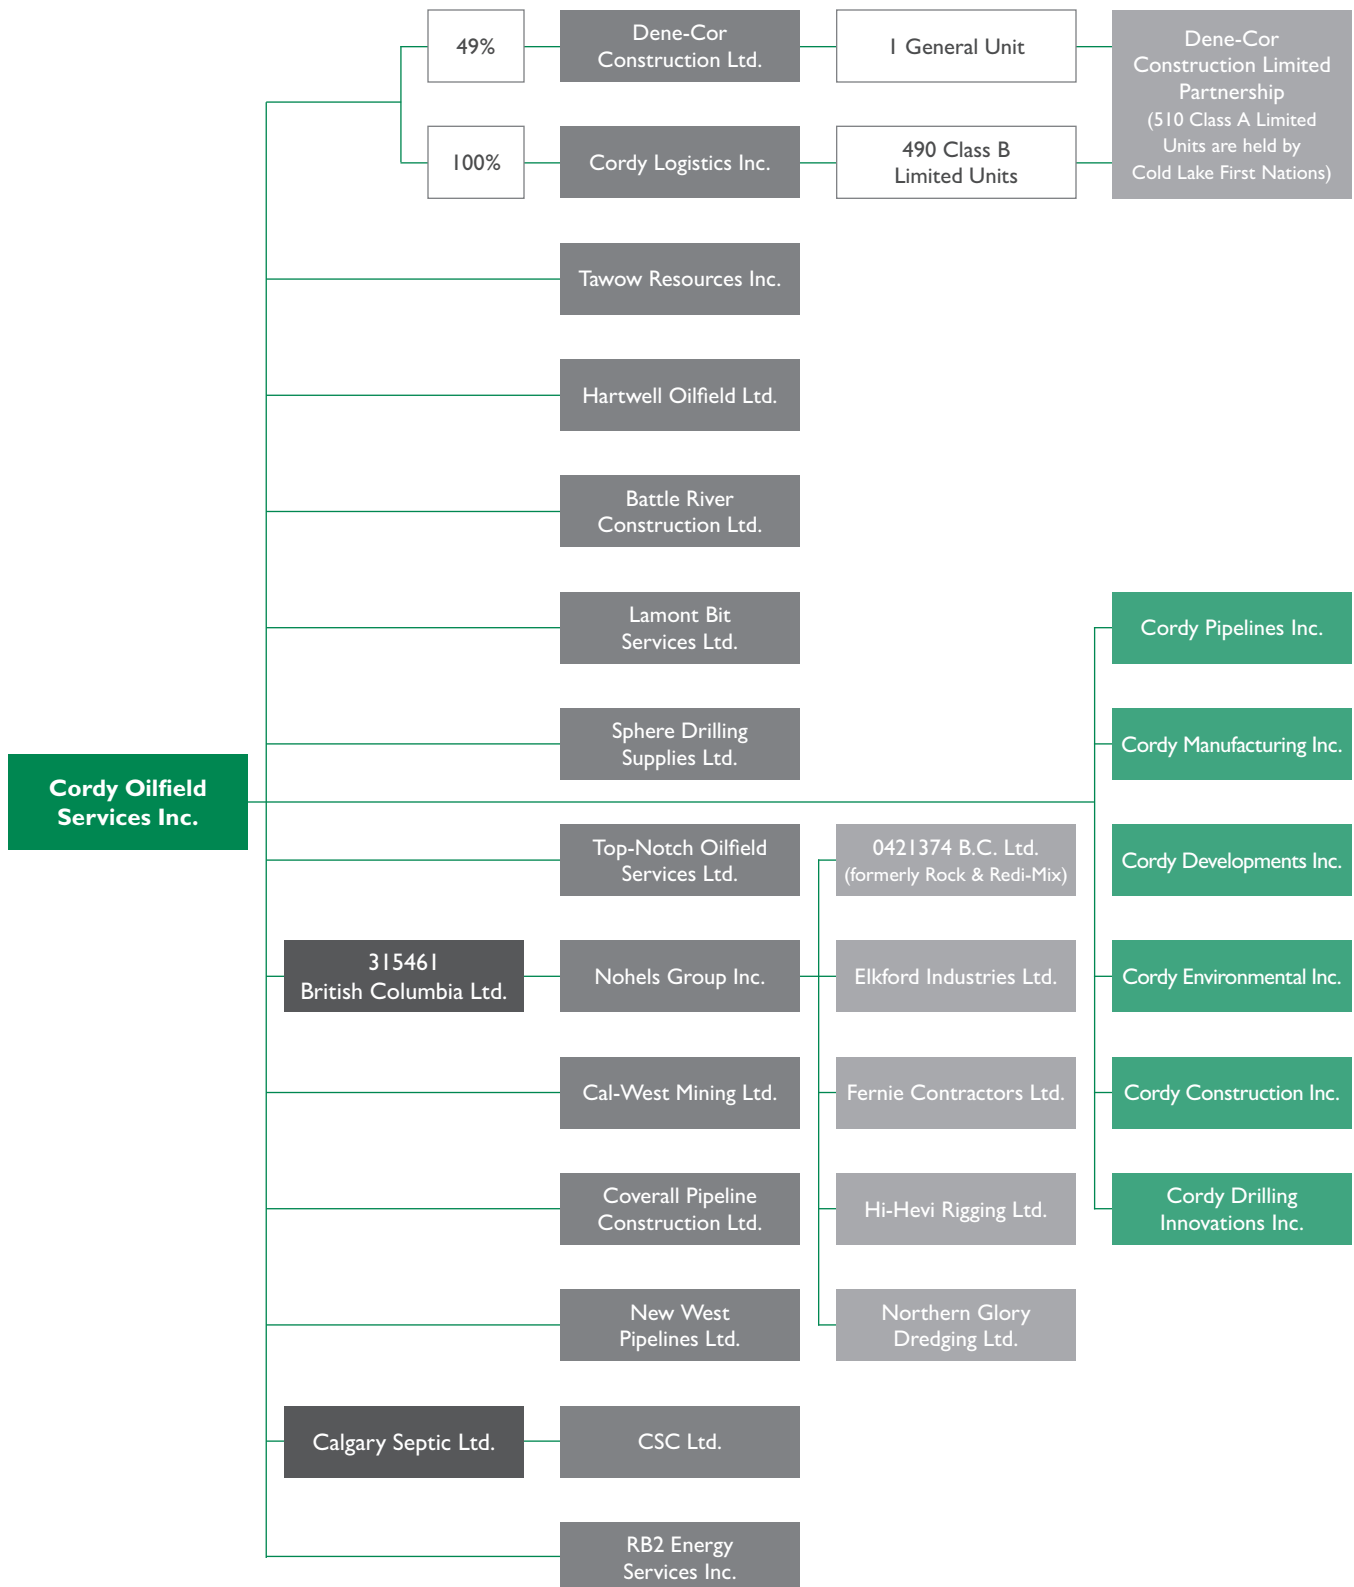

Cordy is a holding company that owns 100% of the shares of each company listed below (unless otherwise specified). It is through these subsidiaries that Cordy performs its business. In addition to these active subsidiaries Cordy has 100% ownership of certain holding companies and inactive legal entities as outlined in the organizational chart. These companies are incorporated under the laws of Alberta and British Columbia and did not have any significant assets or transactions during the year.

Active Companies Incorporated Under The Laws of Alberta:

- Battle River Oilfield Construction Ltd.
- Coverall Pipeline Construction Ltd.
- Top-Notch Oilfield Services Ltd.
- New West Pipelines Ltd.
- Sphere Drilling Supplies Ltd.
- Lamont Bit Services Ltd.
- CSC Ltd.
- Hartwell Oilfield Ltd.
- Tawow Resources Inc.
- Cordy Logistics Inc.
- Cordy Drilling Innovations Inc.
- Dene-Cor Construction Ltd. (49%)
- RB2 Energy Services Inc.

Active Companies Incorporated Under The Laws of British Columbia:

- Nohels Group Inc.

GENERAL DEVELOPMENT OF THE BUSINESS

Three Year History

The Corporation entered the energy services and construction industries in 2006 and between January 2006 and May 2007 acquired eleven businesses located in Alberta and British Columbia. Following completion of these acquisitions, the Corporation carried on business through four industry segments: heavy construction, pipeline and facilities construction, manufacturing and supply and environmental services. See "DESCRIPTION OF THE BUSINESS OF THE CORPORATION".

2009

On October 1, 2009 the Corporation acquired all of the issued and outstanding securities of Tawow in consideration of the payment of \$0.2 million in cash, the granting of a promissory note in the amount of \$0.2 million due January 29, 2010 and the issuance of a total of 820,000 Common Shares of the Corporation valued at \$0.1 million using an attributed price of \$0.155 per share.

In accordance with the purchase agreements, additional consideration is payable in the form of bonus payments based on future financial performance of Tawow. For each of the fiscal years of Tawow ended September 30, 2010 and September 30, 2011, the bonus payments are calculated based on the earnings before income tax, depreciation and amortization (EBITDA) of Tawow in excess of \$20,000 each annual period up to a maximum of \$0.5 million for each of the two years. In accordance with the purchase agreement, additional consideration of \$0.3 million was deemed payable at September 30, 2010 based on the EBITDA of Tawow for the 12 months then ended. Tawow is an oilfield service company headquartered on the Tsuu T'ina Nation that provides tree cutting and removal and other services primarily to geophysical contractors.

The Corporation's cash flow from operations declined significantly in 2009 as a result of the continuing economic downturn experienced in the oil and gas and construction industries in western Canada. The decline in cash flow from operations required the Corporation to draw down cash balances that existed at December 31, 2008 to fund scheduled repayments of debt and capital leases. At December 31, 2009, the Corporation had cash balances of \$0.2 million compared to cash and cash equivalents of \$5.4 million at December 31, 2008.

In October 2009, the Corporation undertook a private placement for proceeds of \$4.8 million. The proceeds from the placement were anticipated to be used to provide liquidity, meet short-term working capital needs, fund acquisitions and repay debt. In November 2009, the private placement was terminated through agreement by all participants. The proceeds of the private placement were returned to the participants and the common shares and warrants were returned to treasury for cancellation.

As a result of the termination of the private placement, the Corporation was obliged to pursue other long-term financing options such as long-term debt, refinancing of existing debt to defer or reduce scheduled principal payments, the disposition of assets or divisions and other alternatives.

Due to the decline in cash balances and cash flow from operations, the Corporation determined that a portion of its goodwill was impaired as the estimated future cash flows from these assets and operating units did not support their stated values. The impairment recorded was \$2.5 million.

2010

The overall performance of the Corporation improved in 2010 compared to the prior year. The Corporation's ability to withstand the economic slowdown was primarily a result of the diversification of Cordy's service offerings, management's strategy to focus the Corporation on its core areas of expertise, and reducing debt to position Cordy to take advantage of an upswing in the economy.

Focusing the Corporation on its areas of expertise contributed to the significant improvement in the operational results of its business units in 2010. Some business units experienced significant improvements in margins from the prior year by concentrating on core expertise and exiting service offerings that were not profitable. Likewise, in all areas of the Corporation during the year, the improved execution of its service offerings resulted in improved margins through the reduction of costs.

During the year, Cordy continued to develop and maintain relationships with the various First Nations groups throughout western Canada. As a result of these initiatives, the company entered into a strategic partnership with the Cold Lake First Nations and commenced operations during the year under the name "Dene-Cor". This mutually beneficial relationship provides new access to growth opportunities for both parties by enhancing the scope and delivery of the services that can be provided.

2011

2011 was a year of recovery for Cordy. The economic challenges that appeared in 2007 but became predominant in 2008 resulted in a substantial decrease in commodity prices causing a reduction in activity in the energy services industry not seen since the early 1980s. As the economic crisis unfolded, Cordy's revenues from continuing operations decreased from a high of \$109.6 million in 2008 to their lowest point of \$47.8 million in 2009, an aggregate decline of \$61.8 million, precipitating aggregate impairment losses of \$42.6 million in 2008 and 2009. Marginal improvements were realized in 2010 as the price of commodities recovered and advancements in energy extraction technology utilizing horizontal wells completed with multi-stage hydraulic fracturing generated activity in the energy sector. The much stronger financial results of 2011 indicate that the energy sector has recovered and the Corporation has emerged from the downturn in an enviable position. Revenues, operating margins, and earnings from continued operation neared or exceeded the levels attained in 2007 and the Corporation exited the year with minimal debt and an overall strong balance sheet. This in turn positions the Corporation favourably as the outlook in the energy industry appears positive, along with the overall economic climate across Canada's Prairie provinces.

During the latter part of 2011, Cordy developed a new down-hole tool that is applied in the horizontal drilling process. Results achieved so far are favourable and management is cautiously optimistic it will contribute toward improving operating earnings in 2012. In November, 2011 the Corporation entered into a sale agreement to sell the Bob Quinn camp for a total consideration of \$1.9 million. The camp was held within the Heavy Construction segment. Near the end of 2011, a board approved plan was implemented to discontinue the Heavy Construction operations at Mesken Contracting Ltd. The financial results and operating details of the discontinued operation are excluded from this Annual Information Form.

On June 30, 2011, the Corporation acquired all of the issued and outstanding shares of RB2 Energy Services Inc. in consideration of the payment of 2,900,000 Common Shares of the Corporation at a deemed price of \$0.50 per share, a cash payment of approximately \$0.6 million, a promissory note of approximately \$0.3 million, and the assumption of debt and repayment of shareholder loans in the amount of approximately \$0.8 million. This acquisition increased the Corporation's Environmental Segment equipment fleet and contributed to the year-over-year growth of the segment in terms of both revenue and earnings.

In the six months to December 31, 2011 RB2 contributed revenue of \$2.4 million and net earnings of \$0.2 million. If the acquisition had occurred on January 1, 2011, management estimates that consolidated revenue would have been \$5.2 million, and consolidated profit for the period would have been \$0.3 million. In determining these amounts, management has assumed that the fair value adjustments, determined provisionally, that arose on the date of acquisition would have been the same if the acquisition had occurred on January 1, 2011.

Outlook for 2012

Management is optimistic for 2012. At the start of 2011 Cordy indicated there was a renewed sense of optimism in the energy services sector and that this should allow for improved financial performance. Cordy's financial results from continued operations in 2011 validated that assertion and the Corporation outperformed management's expectations for 2011, with the Corporation's financial results from continued operations for the year nearing pre-recession levels. Cordy's willingness to discontinue a business that was no longer advancing the Corporation's strategic plan and was delivering weak performance demonstrates management's commitment to maintaining operational excellence, achieving stronger margins and creating value for shareholders.

Looking ahead to the remainder of 2012, risks certainly remain in the global economy, and the most prevalent regional risk in western Canada's energy sector is the severely depressed price of natural gas, which was below \$2 per gigajoule¹ in early March 2012. Management believes the steps it has taken to increase its operational exposure to the mining, conventional oil, heavy oil, liquids-rich gas and oil sands regions will mitigate this risk in 2012.

Management expects year-over-year growth in all of its business segments in 2012 and, in general, expects the organization to continue building on the performance achieved in 2011. In addition to revenue growth, management is focused on increasing earnings per share and generating sustainable earnings by growing the organization organically and through strategic acquisitions.

¹ AECO average natural gas spot price on March 15, 2012 was 1.81 C\$/Mcf.

Significant Acquisitions

There were no significant acquisitions or significant dispositions by the Corporation or any significant probable acquisition by the Corporation during the financial year ended December 31, 2011.

DESCRIPTION OF THE BUSINESS OF THE CORPORATION

The Corporation is an energy services and construction company. The Corporation conducts its business through four industry segments: heavy construction, pipeline and facilities construction, manufacturing and supply and environmental services.

A. HEAVY CONSTRUCTION

The heavy construction segment of Cordy's business is conducted through Battle River; Nohels; and Tawow (the "Heavy Construction Segment").

Summary

The Heavy Construction Segment accounts for 48% of the 2011 total revenue generated by the Corporation (46% in 2010). The majority of the services are provided to oil and gas production companies, private developers, public infrastructure and mines in Alberta and British Columbia.

Services provided by the Heavy Construction Segment include:

- Mining services;
- Infrastructure construction and maintenance including roads, reservoirs, deep and shallow water sewage and storm water reticulation;
- Construction, maintenance and reclamation of oilfield leases and lease roads;
- Heavy haulage;
- Gravel supply and delivery;
- Right of way clearing;
- Bridge and culvert installation; and
- Camp services.

Geographic diversity is important for Cordy. The Corporation maintains a presence and is an integral part of the communities where it typically works. This enables the business leaders to develop and maintain solid relationships with customers and employees. The Heavy Construction Segment operations are based out of Manning, Grande Prairie and the Tsuu T'ina Nation in Alberta and Sparwood, British Columbia.

i) Services

The Heavy Construction Segment uses its own equipment and employees in providing its services and utilizes rented or leased operational facilities, equipment and subcontractors as necessary. The operational facilities include shops and yards that are used to maintain and repair equipment as well as for storage.

The Heavy Construction Segment operates and maintains approximately 74 pieces of automotive equipment (winch tractors, picker trucks, tractors, trailers, one ton trucks and pick-up trucks), 79 pieces of earthmoving equipment (dozers, rock trucks, scrapers, side booms, graders, loaders and excavators) and two permanent camps and one portable camp which can accommodate, in aggregate, 360 people.

ii) Specialized Skills and Knowledge

In order for the Heavy Construction Segment to meet the demands for its products and services, the Corporation must continue to invest in additional resources.

This segment continuously strives to put the right people in the right place and ensure a high level of skills and knowledge through a combination of development, training and recruitment to meet the demands of all its operations.

This segment looks to provide customers with the specialized talent, front-line management and tradespeople to successfully handle their projects in both difficult locations and conditions. Experience, skill and innovation, ability to plan, organize and work efficiently in challenging, geographically diverse locations and in the extreme western Canadian climate represent some of the Corporation's specialized skills in this segment.

The Heavy Construction Segment is conversant in a wide range of complex and multi-disciplined roles. The business leaders work proactively and closely with customers to deliver the optimum economics of construction and long-term operational results within defined parameters and with a clear focus and pursuit of quality and safety. The goal is to execute on each project in the spirit of teamwork and cooperation from start to finish.

iii) Competitive Conditions

In general, the markets served by the Heavy Construction Segment are highly competitive. Competition for larger capital project services, specifically, is narrower and primarily limited to those capable of providing comprehensive equipment, tool and management services.

The barriers to entry are financially and logistically low with the result that this industry segment is highly fragmented. An increasing number of companies are competing in the markets served by this segment of the Corporation's business.

The key competitive factors in this segment are price, service, quality, breadth of service, capacity to perform, the ability to identify and retain qualified personnel and geographical coverage. The ability and reputation of successfully providing the project execution skills required for completing complex projects in a safe, timely and cost-efficient manner is a differentiator.

While there are many competitors that provide similar services in the Heavy Construction Segment, the Corporation derives its competitive strength from its diversity, reputation for quality, access to a large modern fleet of equipment, technology, cost-effectiveness, project management expertise, geographic coverage, ability to meet customer requirements on projects of varying sizes and its safety record.

The fact that the Heavy Construction Segment has established its operations in set geographical locations also provides it with a competitive advantage as the business leaders remain proximate to work sources and have an intimate knowledge of the regions serviced. Management believes:

- its key elements of competition in providing services in this area are reputation, long-term relationships, commitment and price
- access to a modern fleet of equipment which allows for greater uptime and improved efficiency.
- the Corporation's operational systems, resources and customer relationships provide it with the ability to compete in this market

iv) Components

The majority of equipment used in the Segment is provided by Lyncorp International Ltd., a company wholly-owned by David Mullen. The equipment made available from Lyncorp is newer than what is typically available and is provided at rates equal to, or better than what is available on the open market. The labour market in western Canada is a highly fragmented market with companies increasingly competing nationally and internationally for skilled labour.

v) Cycles

The Heavy Construction Segment business is affected by seasonal changes. In general, the level of activity is influenced by seasonal weather patterns. The peak activity period is during the months when the ground is dry or frozen with the non-peak seasons being the months when the ground is too wet to move or use heavy equipment. Historically, the Heavy Construction Segment has been able to secure sufficient projects during the non-peak seasons to enable it to retain its core work and properly utilize its equipment in a profitable manner.

vi) Contractual Conditions

While the basic terms and conditions of the contracts performed may vary considerably, generally the Heavy Construction Segment performs its work under cost reimbursable contracts.

Under cost reimbursable contracts, the customer reimburses the project costs and pays a pre-determined fee or a fee based upon a percentage of the costs incurred on the project. The Corporation's profit may be in the form of a fee, a mark-up applied to costs incurred in performing the contract, or a combination of the two. The fee element may also vary. The fee may be an incentive fee based upon achieving certain performance factors, milestones or targets; it may be a fixed amount in the contract; or it may be based upon a percentage of the cost incurred.

vii) Environmental Protection

Management of the Corporation believes the Heavy Construction Segment is in material compliance with all environmental protection regulations governing its activities. The financial and operational effects of environmental protection requirements on the capital expenditures, earnings and competitive positions of the Heavy Construction Segment are not expected to be material in the current financial year or in future years.

viii) Employees

The Heavy Construction Segment, as at December 31, 2011, employed approximately 138 full-time employees and approximately 14 subcontractors. During the peak heavy construction season the segment employed approximately 189 full-time employees and 14 subcontractors.

B. PIPELINE AND FACILITIES CONSTRUCTION

The pipeline and facilities construction segment of Cordy's business is conducted through New West, Coverall, and Top-Notch (the "Pipeline Segment").

Summary

The Pipeline Segment accounts for 18% of the 2011 total revenue generated by the Corporation (19% in 2010). The primary focus of this segment is to serve as a general contractor for construction of small to medium diameter pipeline construction, primarily less than 12" in diameter. In conjunction with pipeline construction, the Pipeline Segment also undertakes the construction and modification of production well sites, metering sites, oil batteries and gas compression and processing facilities. The majority of the services are provided to large and mid-sized oil and gas production companies.

Services provided by the Pipeline Segment include:

- Pipeline integrity management;
- Right of Way clearing and preparation;
- Environmental reclamation and lease maintenance;
- Oil & Gas gathering systems;
- Well head hook ups;
- Metering facilities;
- Oil batteries and satellites;
- Sweet and sour facilities and low pressure gas tie-ins;
- Dehydrators and separators;
- Compressors and tank farms;
- Pipeline installations;
- Water injection lines;
- Pipeline maintenance and repairs;
- Decommissioning old well sites; and
- Transport of facility components to production sites.

The Pipeline Segment operations are based out of Sundre and Grande Prairie, Alberta.

i) Services

The Pipeline Segment uses its own equipment and employees in providing its services and utilizes rented or leased operational facilities, equipment and subcontractors as necessary. The operational facilities contain shops and yards that are used to maintain and repair equipment as well as for storage.

The Pipeline Segment operates and carefully maintains approximately 55 pieces of automotive equipment (picker trucks, tractors, trailers, one ton trucks and pick-up trucks) and 22 pieces of earthmoving equipment (dozers, side booms, graders, loaders and excavators). The equipment used is modern and tailored to operate within the geographic areas served by the Pipeline Segment.

ii) **Specialized Skills and Knowledge**

The Pipeline Segment recognizes the changing economic conditions of the oil and gas industry. The Corporation has assembled the expertise to take on projects that pose a variety of challenges such as location, terrain, and requirements for new processes and technology. Business leaders think carefully about the projects undertaken and assemble the best team possible for each project. The Pipeline Segment's commitment also extends to leaving the smallest environmental footprint in the areas of work.

The Pipeline Segment is committed to ensuring that every project meets the standards for safety and efficiency. Management believes that with an experienced front line management team, talented trades people, local facilities, modern equipment and tight controls the Pipeline Segment is able to achieve efficiencies and successfully complete customers' projects on time. The business leaders operate on the premise that the Corporation is understanding and aware of the time-critical requirements of its customers and the pressure on the oil and natural gas producers and distributors to meet strict schedules.

iii) **Competitive Conditions**

In general, the markets served by the Pipeline Segment are highly competitive. The pipeline and facilities construction industry has relatively few barriers to entry for companies wishing to offer one or both services that the Pipeline Segment provides. An increasing number of companies are competing in the markets served by this segment.

The key competitive factors in this segment are price, service, quality, breadth of service, capacity to perform, the ability to identify and retain qualified personnel and geographical coverage. The ability and reputation of successfully providing the project execution skills required for completing complex projects in a safe, timely and cost-efficient manner is a differentiator. Time is one of the greatest challenges in this industry segment with pressure from all sides – the oil and natural gas producers and the distributors – to meet strict deadlines. While there are many competitors that provide the same services as the Pipeline Segment, the Corporation derives its competitive strength from relationships and the ability to communicate effectively with customers and employees. The business leaders are realistic about what can and cannot be completed within a certain time frame. This segment has a reputation as a reliable contracting service capable of meeting customers' needs safely and on time. The business leaders take pride in developing strong relationships with customers. This segment's objective is to maintain the reputation developed as a leader in pipeline and facilities construction by continuously using the utmost of care for public and personal safety and minimizing damage to the environment.

The fact that the Pipeline Segment has established its operations in set geographical locations provides it with a competitive advantage as it remains proximate to work sources and has an intimate knowledge of the regions serviced.

Management believes the key elements of competition in providing services in this area are reputation, long-term relationships, commitment and price. Management further believes the Pipeline Segment's reputation and favourable relationships enables it to compete more successfully for business. Management believes the Corporation's operational systems, resources and customer relationships provide it with the ability to compete in this market.

iv) **Components**

The majority of equipment used in the Segment is provided by Lyncorp International Ltd., a company wholly-owned by David Mullen. The equipment made available from Lyncorp is newer than what is typically available and is provided at rates equal to, or better than what is available on the open market. The labour market in western Canada is a highly fragmented market with companies increasingly competing nationally and internationally for skilled labour.

v) **Cycles**

The Pipeline Segment provides its services to the oil and gas production industry and, as such, its business is affected by the seasonal nature of that industry in Canada. In general, the level of activity is influenced by seasonal weather patterns. The peak activity period is during the winter months when the ground is frozen with the non-peak seasons being the spring and summer months. Historically, the Pipeline Segment has been able to secure sufficient projects during non-peak seasons to enable it to retain its core work force and properly utilize its owned equipment.

vi) **Contractual Conditions**

The basic terms and conditions of the contracts performed may vary considerably. Generally, the Pipeline Segment's work is performed under two types of contracts: hourly rates or fixed bid price.

vii) **Environmental Protection**

Management of the Corporation believes the Pipeline Segment is in material compliance with all environmental protection regulations governing its activities. The financial and operational effects of environmental protection requirements on the capital expenditures, earnings and competitive positions are not expected to be material in the current financial year or in future years.

viii) **Employees**

The Pipeline Segment, as at December 31, 2011, employed approximately 70 full-time employees and approximately 31 subcontractors. During the peak season the segment employed approximately 77 full-time employees and approximately 34 subcontractors.

C. MANUFACTURING AND SUPPLY

The manufacturing and supply segment of Cordy's business is conducted through Cordy Drilling Innovations, Sphere and Lamont (the "Manufacturing and Supply Segment").

Summary

The Manufacturing and Supply Segment accounts for 13% of the 2011 total revenue generated by the Corporation (15% in 2010). This segment provides products and services to the oil sands exploration and seismic industry as well as drilling solutions to the mining, construction, environmental, geotechnical and water well industries. A recent venture in 2011 also has the Corporation designing, developing and manufacturing innovative drilling PDC drill bit products for oil and gas applications. There has been a demand from international customers for the segment's products and services; however, the majority of this segment's customers are located in western Canada.

Services provided by the Manufacturing and Supply Segment include:

- Manufacturing and supplying of stock and customized drill bits, down hole hammers and hammer bits, rock bits, construction drilling products, mining drilling products and seismic drilling products;
- Manufacturing and supplying of stock and customized mining tools;
- Designing, developing and manufacturing PDCdrill bit products for oil and gas drilling applications;
- Selling, renting and servicing bottom hole assemblies and their components;
- Renting large diameter hammers and accessories for wide diameter casing systems such as pilings and elevator shafts; and
- Providing customized drilling solutions through in-house design and manufacturing capabilities whereby overall assistance is provided with respect to job design, product design, start-up, training and job completion.

i) **Products and Services**

Approximately 40% of the products provided by the Manufacturing and Supply Segment are produced in-house while the remaining 60% of the products provided are purchased from suppliers and resold. Included in the products produced in-house are the PDC drill bits, which differ from the Segments traditional sales in that they are leased and serviced for multiple runs and customers.

The Manufacturing and Supply Segment uses its own equipment and employees in providing its products and services. The operational facilities are located in Calgary, Alberta and contain manufacturing equipment such as computer numerical control ("CNC") machine tools, a CNC five axis machining center, manual machine tools, sub arc welding equipment and computerized welding equipment. Most of the equipment used by the Manufacturing and Supply Segment is state of the art, well maintained and tailored to operate within the areas and industries served by this segment.

ii) **Specialized Skills and Knowledge**

The Manufacturing and Supply Segment focuses on adopting productivity-enhancing manufacturing techniques and obtaining the tools, people and resources it needs to improve the manufacturing process and performance. This segment has built and maintained an outstanding reputation for dedicated customer service and meeting the specific and unique needs of its customers. The Manufacturing and Supply Segment has the technical expertise required to be innovative and supportive to customers in each industry served.

Sphere's quality management system for the design and manufacturing of down hole drilling tools is registered with the quality management system requirements of ISO 9001:2008 and ISO/TS 29001-2010.

iii) **Competitive Conditions**

Management believes the Manufacturing and Supply Segment is a leader in its principal markets and has a competitive advantage over many of its competitors by being able to provide a complete solution rather than one product or service. Management has identified other factors it believes contribute to this segment's competitive advantage including:

- Strong network contacts, relationships and trust-based partnerships within the industries served;
- A focus on total quality and customer satisfaction;
- Systematic continuous improvement and the elimination of non-value adding activities using technologically advanced equipment; and
- Employee involvement, training and empowerment.
- Unique and innovative PDC bit designs.

iv) **Components**

Long-standing relationships have been established with suppliers. Most of the equipment and material used in the operations is readily available from several sources at competitive prices.

v) **Cycles**

The Manufacturing and Supply Segment has a relatively stable business cycle. The products and services are provided to a number of businesses that are outside the oil and gas sector.

During the winter months the concentration is on the oil sands and seismic exploration. For the remainder of the year the segment concentrates on supplying the mining production drilling, mineral exploration, water well drilling and geotechnical drilling businesses.

vi) **Economic Dependence**

In tough times customers are more fickle, skeptical, demanding and pricing is the primary driver. Although conditions have somewhat improved, management continues to focus on isolating the areas where cost containment efforts can strengthen the segment's ability to withstand market uncertainty while positioning the segment for future success.

vii) **Environmental Protection**

Management believes the Manufacturing and Supply Segment is in material compliance with all environmental protection regulations governing its activities. The financial and operational effects of environmental protection requirements on the capital expenditures, earnings and competitive positions of the Manufacturing and Supply Segment are not expected to be material in the current financial year or in future years.

viii) **Employees**

The Manufacturing and Supply Segment, as at December 31, 2011, employed approximately 27 full-time employees with a total of approximately 31 people during their peak.

D. ENVIRONMENTAL SERVICES

The environmental services segment of Cordy's business is conducted through CSC, RB2 and Hartwell (the "Environmental Segment").

Summary

The Environmental Segment accounts for 21% of the 2011 total revenue generated by the Corporation (20% in 2010). The Environmental Segment is generally involved in providing environmental clean-up, hazardous goods transport and containment services that organizations require to operate in a safe and environmentally responsible manner.

The Environmental Segment provides its services to the oil and gas services, production, industrial and commercial industries. The services are provided to customers located throughout Alberta.

Services provided by the Environmental Segment include:

- Fluid hauling
- Hydro-Excavation
 - Exposing Gas, Electrical, Phone, and Cable lines
 - Contaminated Soil and Spill Removal
 - Vessel Cleaning, Steam and Pressure Wash
 - Dangerous Goods Transport
- Water Blasting
 - Pressure Washing
 - Towers and Vessels
 - Projects and Turnarounds
- Drilling Rigs
 - Transfer and Spread Drilling Fluids
- Oil Field and Industrial Services
- 24-Hour Emergency Response
- Dangerous Goods Transport
- Confined Space Entry
- Facility Turnarounds
- High Pressure and Steam Cleaning
- Line and Sewer Flushing
- Commercial Lift Station and Field Installation
- Water Hauling
- Pressure Testing
- Thawing Frozen Lines

i) **Services**

The Environmental Segment uses its own equipment and employees in providing its services and utilizes rented or leased equipment and subcontractors as necessary. The operational facilities contain shops and yards that are used to maintain and repair equipment as well as for storage.

The Environmental Segment operates and carefully maintains a modern fleet of specialized equipment including: approximately, 36 vacuum trucks, 11 hydro vac trucks, 11 water trucks, 7 water hauler trailers, 1 high pressure unit, 2 chemical trucks, 1 gravel truck and pup and 20 well-site trailers.

ii) **Specialized Skills and Knowledge**

This segment of the Corporation provides superior standards of service and performance with utmost importance placed on the protection, health, and safety of employees, the community and the environment. The business leaders believe in teamwork and encourage continuous personal and professional improvements. Each equipment operator is required to complete training for numerous certifications including, TDG, H2S Alive, WHIMIS, Confined Space Entry and CPR. These instructional courses, coupled with an intensive, hands-on training period, enable this segment's employees to acquire the skill and knowledge needed to make responsible decisions, with both confidence and expertise. Employee Health and Safety and Substance Abuse Programs have been designed around the strictest of health, safety and environmental standards.

CSC and Hartwell are members of the Alberta Construction Association, participating in the Partnership in Injury Reduction Program.

iii) **Competitive Conditions**

The Environmental Segment competes with a number of companies that provide the same or similar services. A number of these competitors are relatively small, some are new businesses consisting of one or two pieces of equipment and, while these operations may acquire some of the available business, management of the Corporation does not see them as posing a material threat. Most of the significant competition comes from larger entities, some of which are public companies. Management believes the Environmental Segment is able to set itself apart by maintaining a solid reputation, developing an understanding of the industries it serves and through retention of key employees who are able to maintain long-term relationships with customers.

iv) **Cycles**

The environmental services provided to the energy sector are affected by weather conditions. The thawing that occurs during spring break renders many secondary roads incapable of supporting heavy equipment resulting in this being a slower period for this particular business line. Increasingly, the Environmental Segment has been able to secure sufficient projects during non-peak seasons to enable it to retain its core work force, properly utilize its owned equipment and maintain profitability.

v) **Economic Dependence**

A significant portion of the Environmental Segment's revenues is generated from industrial services. Customers in the industrial services sector are not as immediately susceptible to the impact of a downturn in the oil and gas industry. However, a portion of the Environmental Segment's revenues is generated from customers operating in the oil and gas industry in western Canada. A decline in commodity prices for oil and gas, regulatory changes and technological changes could result in a decline in oil and gas production. This segment is susceptible to these types of changes. To the extent appropriate, management has adopted business practices, including diversification of its customer base, to protect the Corporation from the changing conditions of the oil and gas industry specifically.

vi) **Environmental Protection**

The Environmental Segment is heavily impacted by environmental protection requirements. Management takes a proactive approach to these requirements and attempts to position the segment ahead of the current regulations through the use of new technologies. Management believes the cost of compliance by the Environmental Segment with increased environmental protection regulations is offset by the increase in demand for the Environmental Segment's services that these new regulations generally create. Environmental protection requirements have impacted capital expenditures and it is expected by management that similar expenditures will occur into the reasonably foreseeable future.

vii) **Employees**

The Environmental Segment, as at December 31, 2011, employed approximately 119 full-time employees with a total of approximately 126 people during the peak season.

RISK FACTORS

The Corporation has a risk management review process to ensure that risks are identified, discussed and mitigated where possible. The risk management review process highlights the significant risks which then lead to mitigation plans through, among other things, the establishment of standards and other controls. The inability to identify, assess and respond to risks through the risk management review process could lead to, among other things, an inability to capture opportunities, threats materializing, inefficiency and non-compliance with laws and regulations.

The Corporation has established and enforces a corporate wide Code of Conduct and has an anonymous Whistleblower protocol that complements its risk management process.

Management believes that the risks described below are the ones that could have the most significant impact on the Corporation. Readers are cautioned that the list of risks is not exhaustive and new information, future events or changing circumstances could affect the operations and financial results of the Corporation. Many of these risks, for example, the cyclical nature of the energy and construction industries, can be mitigated to a certain degree but are influenced by numerous factors over which the Corporation has no control.

i) Liquidity Risk

Liquidity risk is the risk that the Corporation will not be able to meet its financial obligations as they become due. The Corporation is exposed to liquidity risk if it is unable to collect its trade accounts receivable balances on a timely basis, which in turn could impact the Corporation's ability to meet commitments under its credit facilities. In order to manage its liquidity risk, the Corporation has a policy to maintain a positive working capital balance, a diverse clientele of well-established and well financed entities, and sufficient capacity within its operating credit facility to meet any immediate liquidity requirements. The Corporation believes that forecasted cash flows from operating activities, along with available lines of credit, will provide a sufficient cash resource to fund the Corporation's operating requirements and capital expenditures.

In order to cover short-term working capital deficiencies, the Corporation has access to a \$5 million operating line facility. At December 31, 2011 the Corporation was in compliance with the covenants relating to the facility pursuant to the terms and conditions of the agreement.

ii) Credit Risk

Credit risk represents the financial loss to the Corporation if a customer fails to meet its contractual obligations. The Corporation is exposed to credit risk related to the collection of its trade accounts receivable of which approximately 76% are due from customers connected to the oil and gas industry. Management regularly assesses the Corporation's exposure to credit risk and provides allowances for potentially uncollectible accounts receivable as they become known. Although collection of these receivables could be influenced by economic factors, management considers the risk of significant loss mitigated by the number, reputation and diversified nature of the companies with which the Corporation does business.

iii) Interest Rate Risk

Interest rate risk arises from changes in market interest rates that may affect the fair value or future cash flows from the Corporation's financial assets or liabilities. The Corporation is exposed to interest rate risk on certain debt instruments to the extent of changes in the underlying market interest rates. Exposure to interest rate risk is minimal at this time as the majority of the Corporation's borrowings bear interest at fixed rates.

iv) Foreign Currency Risk

Foreign exchange risk represents the effect of changes in foreign exchange rates on the fair value or future cash flows of the Corporation's financial assets or liabilities. The Corporation enters into transactions denominated in United States dollars for which the related revenues, expenses and working capital balances are subject to exchange fluctuations. Exposure to exchange rate fluctuations are minor due to the short term nature of these working capital balances and the fact that assets and revenues in United States dollars are largely offset by liabilities and expenses in the same currency. During the year ended December 31, 2011, the Corporation recognized \$1.3 million of sales denominated in USD and incurred purchases of \$2.5 million denominated in USD.

v) Access to Additional Financing

The economic slowdown and uncertainty experienced since 2008 continue to have an adverse impact on financial markets. While a tentative recovery from this economic slowdown has been inching forward, access to traditional equity and debt markets remains tight.

These conditions have impacted, and continue to impact, the expenditure plans of both the Corporation and its customers. As a result, the Corporation's ability to fund growth initiatives and acquisitions or other business combination transactions could be negatively affected as there can be no assurance that additional financing will be available to the Corporation when needed or on terms acceptable to the Corporation. The Corporation's inability to raise financing to support ongoing operations or to fund capital expenditures or acquisitions could limit the Corporation's growth and may have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

The Corporation manages its balance sheet and cash flows with a view to ensuring that it maintains what it believes are suitable levels of leverage and liquidity and that, to the extent possible, it will have sufficient resources to meet its liabilities when due, under both normal and stressed conditions. However, there can be no assurance that additional financing will be available to the Corporation when needed or on terms acceptable to the Corporation.

vi) Vulnerability to Market Changes

Petroleum prices are expected to remain volatile in the near future. As a service provider to the energy industry, the Corporation is highly reliant on the levels of capital expenditures made by the energy producers. A prolonged period of volatile pricing could lead to continued fluctuations in customers' business plans and spending patterns which could result in reduced demand for the Corporation's products and services. Inflation and cost escalations, including costs associated with renting equipment, leasing facilities, labour costs, insurance, interest and fuel costs are other factors over which the Corporation has little or no control. As these costs represent a significant portion of the Corporation's costs, an inability to offset these increases through increased prices or improved operating efficiencies could adversely affect the Corporation's financial performance.

In consideration of this risk, management endeavours to ensure that its cost, pricing, resourcing and investment strategies are appropriate to the existing and anticipated levels of activity during a volatile market.

vii) Volatility of Industry Conditions

The demand, pricing and terms for energy services in the Corporation's existing and anticipated service areas largely depend upon the level of exploration and development activity for both oil and natural gas. Oil and natural gas industry conditions are influenced by numerous factors including: oil and natural gas prices; expectations about future oil and natural gas prices; levels of consumer demand; the cost of exploring for, producing and delivering oil and natural gas; the expected rates of declining current production; the discovery rates of new oil and natural gas reservoirs; available pipeline and other oil and natural gas transportation capacity; weather conditions; political, regulatory and economic conditions; and the ability of oil and natural gas companies to raise equity capital or debt financing.

The level of activity in the oil and natural gas exploration and production industry is volatile. No assurance can be given that expected trends in oil and natural gas exploration and production activities will continue. Oil and gas pricing is currently fragile and any prolonged or substantial reduction in oil and natural gas prices would likely affect oil and natural gas production levels and therefore affect the demand for services provided by the Corporation to oil and natural gas exploration and production entities. A material decline in oil or natural gas prices or industry activity could have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

Regulatory changes and uncertainty regarding climate control initiatives continue to impact the energy industries decision making. Any addition to, or elimination or curtailment of, government incentives could have a significant impact on the energy services industry. Lower oil and natural gas prices could also: cause the Corporation's customers to seek to terminate, renegotiate or fail to honour the Corporation's services contracts; affect the fair market value of the Corporation's equipment fleet which in turn could trigger a write-down for accounting purposes; affect the Corporation's ability to retain skilled service personnel; and affect the Corporation's ability to obtain access to capital to finance and grow the Corporation's business.

Due to the long-life nature of certain heavy construction and oilfield service equipment the inventory of such equipment does not always correlate with the level of demand for the equipment. Periods of high demand often result in increased capital expenditures on equipment, and those capital expenditures may add capacity that exceeds actual demand in the future. This excess capacity could cause the Corporation's competitors to lower their prices and could lead to a decrease in prices in the heavy construction and oilfield services industries generally, which could have a material adverse effect on the Corporation's operating results and cash flows.

The Corporation mitigates some of these risks through diversification into areas such as manufacturing and supply and environmental services which are not as closely impacted by these volatile conditions.

viii) Seasonality

The level of activity and equipment utilization in the heavy construction and pipeline and facilities construction segments specifically is influenced by seasonal weather. The spring thaw makes the ground unstable and less capable of supporting vehicles with heavy loads. Consequently, municipalities and transportation departments enforce road bans that restrict the movement of heavy equipment, thereby reducing road building, infrastructure construction, drilling and well servicing activity levels. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting equipment utilization rates and revenues.

There is greater demand for oilfield services provided by the Corporation in the winter season when the occurrence of freezing permits the movement and operation of heavy equipment. Consequently, oilfield services activities tend to increase in the fall and peak in the winter months of November through March. However, if an unseasonably warm winter prevents sufficient freezing, the Corporation may not be able to access wellsites and its operating results and financial condition may therefore be adversely affected. The volatility of weather conditions can therefore create unpredictability in activity and equipment utilization rates, which may have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

The Corporation mitigates some of this risk through its diversification into areas such as manufacturing and supply and environmental services which are not as closely impacted by these volatile conditions.

ix) Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and natural gas, and technological advances in fuel economy and energy generation devices could reduce the demand for oil and other liquid hydrocarbons. The Corporation cannot predict the impact of changing demand for oil and natural gas products, and any major changes may have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

x) Reliance on Personnel

The success of the Corporation is dependent upon its ability to attract and retain key personnel. The abilities, expertise, judgment, courage, discretion, and unwavering commitment to deliver results are the key elements required of the Corporation's leaders in this challenging environment. The demand for proven and inspirational leadership is high and the supply is limited. Any loss of the services of the Corporation's key individuals could have a material adverse effect on the business, operations and financial results of the Corporation.

The ability of the Corporation to expand its services is dependent upon its ability to attract additional qualified employees. The ability to secure the services of additional personnel is constrained in times of strong industry activity. The Corporation does not maintain key person insurance.

xi) Failure to Realize Anticipated Benefits of Acquisitions and Dispositions

The Corporation has made, and anticipates that it will continue to make, strategic acquisitions and dispositions of businesses and assets in the ordinary course of business. Acquisitions involve numerous risks, including:

- unanticipated costs and liabilities;
- difficulty of integrating the operations and assets of the acquired business;
- the ability to properly access and maintain an effective internal control environment over an acquired company;
- potential loss of key employees and customers of the acquired companies;
- excess equipment and capacity; and
- an increase in expenses and working capital requirements.

Any acquisition that the Corporation completes could have unforeseen and potentially material adverse effects on the Corporation's financial position and operating results. Achieving the benefits of acquisitions depends in part on successfully consolidating functions and integrating operations, procedures and personnel of all of the businesses acquired by the Corporation in a timely and efficient manner, as well as management of the Corporation's ability to realize the anticipated growth opportunities and synergies from integrating each of the acquired businesses. This integration requires a dedication of management's time, effort and resources which may divert management's focus and resources from other strategic opportunities and from operational matters during this process. The integration process may result in the disruption of ongoing business and customer and employee relationships that may adversely affect the Corporation's ability to achieve all the anticipated benefits of the acquisitions.

Management continually assesses the value and contribution of its personnel, assets, and product and service offerings. Non-core and underutilized assets will be periodically disposed of so the Corporation can focus its efforts and resources more efficiently. Depending on market conditions, such non-core assets, if disposed of could be expected to realize less than their carrying value on the financial statements of the Corporation.

xii) Changes in Financial Reporting

In 2008 the Accounting Standards Board ("AcSB") confirmed that accounting standards in Canada (Canadian Generally Accepted Accounting Principles or "GAAP"), will converge with International Financial Reporting Standards ("IFRS"). Entities are now required to adopt IFRS effective January 1, 2011 with a restatement of the comparative periods for 2010 including an opening balance sheet as at January 1, 2010. Under IFRS there is significantly more disclosure required than under GAAP. The conceptual framework used under IFRS is similar to GAAP, however, there are significant differences in accounting policies, classification of items and nature and extent of note disclosures which must be incorporated under IFRS.

IFRS I First-Time Adoption of International Financial Reporting Standards provides guidance for the initial adoption of IFRS. Under IFRS I the standards are applied retrospectively at the transition date with adjustments to assets and liabilities being offset to Retained earnings (deficit) unless certain exemptions are applied. Cordy has applied the following exemptions to its opening consolidated IFRS statement of financial position dated January 1, 2010:

a) Business combination exemption

Cordy had the option to apply IFRS 3 Business Combinations for all business combinations prior to January 1, 2010. The Corporation elected to use the exemptions made available under IFRS I and as a result business combinations prior to January 1, 2010 were not restated with the exception of earn-out bonuses related to acquisitions prior to January 1, 2010. Under IFRS, subsequent adjustments to goodwill measured in a business combination are not permitted, therefore derecognition of this portion of goodwill in the amount of \$334,994 was required on transition.

b) GAAP fair value and historical cost as deemed cost

Under IFRS I Cordy has the option to use the historical cost or a previously recognized GAAP fair value assessment as the deemed cost on an item-by-item basis for property and equipment. These GAAP fair values were measured at the date of acquisition in a business combination and identified on an item-by-item basis. Items not acquired by way of a business combination are measured at historical cost.

IFRS 1 also outlines specific guidelines that a first time adopter must adhere to under certain circumstances. Cordy is required to apply the standards under IAS 36 Impairment of Assets on the January 1, 2010 transition date. Under Canadian GAAP, goodwill is tested for impairment by comparing the carrying value of goodwill at the reporting level compared to its fair value. Historically Cordy aggregated its Business Units into its four operating segments, namely Heavy Construction, Pipeline, Environmental and Manufacturing for the purposes of goodwill impairment testing. Under IFRS, goodwill is tested for impairment at the lower CGU level. The CGUs at Cordy are the Business Units that make up the operating segments. As a result of this disaggregation under IFRS, Cordy recognized a goodwill impairment of \$2.4 million in the Hartwell CGU with an offset in the opening deficit.

Further adjustments to goodwill resulted from a reclassification of goodwill recognized on the contingent liability (bonus paid to seller based on future earnings) related to the Tawow business acquisition in 2009. Under IFRS, earn-out bonuses payable on an acquisition are recognized as a liability at their estimated fair value on the acquisition date. Subsequent changes in the payable, if any, are recorded in profit and loss. At January 1, 2010, Cordy accrued \$0.8 million with respect to the earn-out bonus payable in 2010 and 2011 with respect to the Tawow acquisition. The offsetting amount was included in the deficit at January 1, 2010. The earn-out bonus paid in 2010 of \$0.3 million was recorded as a reduction of the amount accrued on transition to IFRS versus goodwill as was previously done under Canadian GAAP.

The following table outlines the new accounting pronouncements issued by the International Accounting Standards Board that are applicable to, or may have a future impact on, Cordy. These new pronouncements are effective for financial statements with annual periods beginning on or after January 1, 2013.

IFRS Title	Nature of Change	IFRS Application Date	Note	Impact of Adoption
IFRS 10 – Consolidated Financial Statements	Establishes the principles under financial results, which a reporting issuer would be required to consolidate an investee's	January 1, 2013	1	Following initial assessment, none anticipated.
IFRS 11 – Joint Arrangements	Establishes the principles under which a reporting issuer accounts for its interest in a joint arrangement, including joint ventures or joint operations.	January 1, 2013	1	Following initial assessment, none anticipated.
IFRS 12 – Disclosure of Interests in Other Entities	Establishes the disclosure requirements for a reporting issuer that has interests in subsidiaries, joint arrangements, associates or other unconsolidated investments.	January 1, 2013	1	Following initial assessment, none anticipated.
IFRS 13 – Fair Value Measurement	Defines fair value, sets out a single IFRS framework for measuring fair value and requires disclosures about fair value measurements.	January 1, 2013	2	Following initial assessment, none anticipated.

xiii) Competition

All segments of the Corporation's business are highly competitive and the Corporation competes with a substantial number of companies which have more equipment and personnel as well as greater financial resources. The Corporation's ability to generate revenue and earnings depends primarily upon its ability to win bids in competitive bidding processes and to perform awarded projects within estimated times and costs. There can be no assurance that such competitors will not substantially increase the resources devoted to the development and marketing of products and services that compete with those of the Corporation or that new or existing competitors will not enter the various markets in which the Corporation is active.

In certain aspects of its business, the Corporation also competes with a number of small and medium-sized companies, which, like the Corporation, have certain competitive and pricing advantages such as low overhead costs and specialized regional strengths.

In addition, reduced levels of activity in the oil and natural gas industry can intensify competition and may result in lower revenue to the Corporation.

The Corporation endeavours to use technology, automated administrative work processes and innovation to increase its competitiveness in each segment of its business.

xiv) Dependence on Suppliers

The ability of the Corporation to compete and grow will be dependent on the Corporation having access, at a reasonable cost and in a timely manner, to products, equipment and equipment parts and components and technology resources. Failure of suppliers to deliver such products, equipment, parts and components and technology resources at a reasonable cost and in a timely manner would be detrimental to the Corporation's ability to maintain existing customers and expand its customer list.

The Corporation's reliance on Lyncorp International Ltd for heavy equipment through its rental program presents a risk whereas if the relationship were to end, the Corporation's financial performances may be adversely affected. To mitigate this risk, Management has maintained relationships with certain key suppliers. No assurances can be given that the Corporation will be successful in maintaining its supply of equipment, parts and components and technology resources.

xv) Economic Dependence

The Corporation's businesses within each operating segment are, to a large extent, economically dependent on a limited number of key customers.

In 2011, 49% of the Heavy Construction Segment's sales were concentrated with three of its largest customers. Likewise, three of the largest customers of the Environmental Segment comprised 32% of sales. The Manufacturing and Supply Segment's largest three customers accounted for 37% of the sales. 43% of the Pipeline and Facilities Construction Segment sales were generated from three of its largest customers. There can be no assurance that the Corporation's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

One customer represented 11% of the Corporation's consolidated revenue for the year ended December 31, 2011.

xvi) Government Regulation

The Corporation's operations and those of its customers are subject to a variety of Canadian federal, provincial and local laws, regulations and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment and the manufacture, management, transportation, storage and disposal of certain materials used in the Corporation's operations.

Management believes the Corporation is in compliance with such laws, regulations and guidelines. The Corporation has invested financial and managerial resources to ensure compliance with applicable laws, regulations and guidelines and will continue to do so in the future. Although such expenditures have not, historically, been material to the Corporation, such laws, regulations and guidelines are subject to change. Accordingly, it is impossible for the Corporation to predict the cost or impact of such laws, regulations or guidelines on its future operations.

Government regulations may change from time to time in response to economic or political conditions. The exercise of discretion by governmental authorities under existing regulations, the implementation of new regulations or the modification of existing regulations affecting the energy industries could reduce demand for the Corporation's services or increase its costs, either of which could have a material adverse impact on the Corporation. It is not expected that any such changes to current laws, regulations or guidelines would affect the operations of the Corporation in a manner materially different than they would affect other companies of a similar size in the industry segments where the Corporation's services are provided.

xvii) Environmental Liability

Certain segments of the Corporation routinely deal with potentially hazardous materials. The Corporation has programs to address compliance with current environmental standards and has policies and procedures to deal with the handling of potentially hazardous materials. There can be no assurance that the Corporation's procedures will prevent environmental damage occurring from spills of materials handled by the Corporation or that such damage has not already occurred. Canadian laws generally impose potential liability to the present or former owner or occupants of properties on which contamination has occurred. Although the Corporation is not aware of any contamination which, if remediation or clean-up were required, would have a material adverse effect on the Corporation, there can be no assurance that the Corporation will not be required, at some future date, to incur significant costs to comply with environmental laws, or that its operations, business, assets or cash flow will not be materially adversely affected by current or future environmental laws. The Corporation may have the benefit of insurance maintained by it or the operator; however, the Corporation may become liable for damages against which it cannot adequately insure or against which it may elect not to insure because of high costs or other reasons.

The Corporation's customers are subject to similar environmental laws and regulations, as well as limits on emissions to the air and discharges into surface and sub-surface waters. While regulatory developments that may follow in subsequent years could have the effect of reducing industry activity, the Corporation cannot predict the nature of the restrictions that may be imposed. The Corporation may be required to increase operating expenses or capital expenditures in order to comply with any new restrictions or regulations.

xviii) Operating Risks and Insurance

Certain of the Corporation's operations are subject to hazards inherent in their respective industries, such as equipment defects, malfunctions and failures, and natural disasters. These hazards could result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to facilities, business interruptions, and damage to or destruction of property and equipment. Although such hazards are primarily the responsibility of the oil and natural gas companies which contract with the Corporation, these risks and hazards could expose the Corporation to substantial liability for personal injury, loss of life, business interruption, property damage or destruction, pollution and other environmental damages.

The Corporation continuously monitors its activities for quality control and safety and maintains an insurance and risk management program to protect its employees, assets and operations that it believes to be adequate and customary in the industry. However, such insurance is subject to coverage limits and exclusions and may not be available for the risks and hazards to which the Corporation is exposed. In addition, no assurance can be given that such insurance will be adequate to cover the Corporation's liabilities or will be generally available in the future or, if available, that premiums will be commercially justifiable.

If the Corporation were to incur substantial liability and such damages were not covered by insurance or were in excess of policy limits, or if the Corporation were to incur such liability at a time when it is not able to obtain liability insurance, this could have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows.

The Corporation also has programs in place to address compliance with current safety and regulatory standards.

xix) Operating Equipment Risks

The ability of the Corporation to meet customer demands in respect to performance and cost will depend upon continuous improvements to its operating equipment. There can be no assurance that the Corporation will be successful in its efforts in this regard or that it will have the resources available to meet this continuing demand. Failure by the Corporation to do so could have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flows. No assurances can be given that its competitors will not achieve technological advantages over the Corporation.

xx) First Nation Relationships

A key part of the Corporation's business strategy is based on developing and maintaining positive relationships with First Nations in geographic areas of strategic importance to the Corporation. These relationships are expected to be important to the Corporation's future operations and to its customers who desire to work on traditional First Nation lands.

The inability to develop and maintain effective relationships with First Nations and to be in compliance with local requirements could adversely affect a portion of the Corporation's business strategy, growth and profitability.

xxi) Legal Proceedings

The Corporation is involved in litigation from time to time in the ordinary course of business. Although the Corporation is not currently a party to any material legal proceedings, legal proceedings could be filed against the Corporation in the future. No assurance can be given as to the final outcome of any legal proceedings or that the ultimate resolution of any legal proceedings will not have a material adverse effect on the Corporation.

xxii) Environmental Risks

All phases of the oil and gas industry present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of federal, provincial and local laws and regulations. Compliance with such legislation can require significant expenditures and a breach may result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liability and potentially increased capital expenditures and operating costs.

The Government of Canada expects Canada to reduce its greenhouse gas emissions to specified levels. There has been much public debate with respect to Canada's ability to meet specified targets and the Government's strategy or alternative strategies with respect to climate change and the control of greenhouse gases. A number of federal, provincial and state governments have announced intentions to regulate greenhouse gases and other air pollutants. These governments are currently developing the regulatory and policy frameworks to deliver on these announcements. In most cases, there are few technical details regarding the implementation and coordination of the plans to reduce emissions. It is also expected that further federal, provincial and state announcements and regulatory frameworks to address emissions will emerge. These initiatives may result in increased operating costs and capital expenditures for oil and natural gas producers, thereby decreasing the demand for the Corporation's services. Given the evolving nature of emission regulation, Management is unable to predict the impact of these initiatives on the Corporation. It is possible that these initiatives will adversely affect the Corporation's business, financial condition, results of operations and cash flows.

DIVIDENDS AND DISTRIBUTIONS

The Corporation has not declared any amount of cash dividends or distributions on its Common Shares and currently intends to reinvest any earnings to fund the development and growth of its business. Any future payments of dividends or distributions will be at the discretion of the board of directors and will depend upon the financial condition, capital requirements and earnings of the Corporation as well as other factors it may deem relevant. The Corporation's Articles of Incorporation do not contain any restrictions on the payments of dividends or distributions.

DESCRIPTION OF CAPITAL STRUCTURE

The Corporation is authorized to issue an unlimited number of Common Shares. The Corporation had 87,353,810 Common Shares outstanding as at December 31, 2011.

The holders of Common Shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares, and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

MARKET FOR SECURITIES

The Corporation's Common Shares are listed on the TSX Venture Exchange under the symbol "CKK". The following table sets forth the monthly price ranges and volumes of trading of the Common Shares on the Exchange from January 1, 2011 until December 31, 2011.

Period	High \$	Low \$	Volume
January	\$0.25	\$0.21	1,588,086

Cease Trade Orders, Bankruptcies, Penalties or Sanctions

No director or executive officer of the Corporation is, or within ten years prior to the date of this AIF, has been a director, a chief executive officer or a chief financial officer of any company (including the Corporation), that:

- (a) was subject to: (i) a cease trade order; (ii) an order similar to a cease trade order; or (iii) an order that denied the relevant company access to any exemption under securities legislation, that was in effect for a period of more than 30 consecutive days (collectively, an "Order"), that was issued while the director or executive officer was acting in the capacity as director, chief executive officer or chief financial officer; or
- (b) was subject to an Order that was issued after the director or executive officer ceased to be a director, chief executive officer or chief financial officer and which resulted from an event that occurred while that person was acting in the capacity as director, chief executive officer or chief financial officer.

No director or executive officer of the Corporation, or a shareholder holding a sufficient number of securities of the Corporation to affect materially control of the Corporation, is, or within ten years prior to the date of this AIF, has been a director or executive officer of any company (including the Corporation) that, while that person was acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets.

No director or executive officer or a shareholder holding a sufficient number of securities of the Corporation to affect materially control of the Corporation, has, within the past ten years prior to the date of this AIF, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or was subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of such person.

No director or executive officer of the Corporation, or a shareholder holding a sufficient number of securities of the Corporation to affect materially control of the Corporation, has been subject to (i) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority, or (ii) any other penalties or sanctions imposed by a court or regulatory body that would be likely to be considered important to a reasonable investor in making an investment decision.

Conflict of Interest

The Corporation's governance policies contain "conflict of interest" provisions similar to those contained in the Business Corporations Act (Alberta). Each director and officer of the Corporation are required to disclose any interest in a material contract or transaction or proposed material contract or transaction with the Corporation or the fact that such person is a director or officer of or otherwise has a material interest in any person who is a party to a material contract or transaction or proposed material contract or transaction with the Corporation.

An agreement was entered into on March 31, 2011 between Cordy and Lyncorp International Ltd., a company wholly-owned by David Mullen. The rental agreement is for new pieces of heavy equipment on a month-to-month basis. The agreement was approved by non-affiliated directors and includes terms and conditions equal to or better than what is currently available in the open market. All transactions related to this agreement have been disclosed in the related party section of the Corporation's 2011 Audited Financial Statements.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

To the best of the Corporation's knowledge, there were no legal proceedings during the year ended December 31, 2011, to which the Corporation is a party or of which any of its property is the subject matter, and there are no such proceedings known to the Corporation to be contemplated.

There are no penalties or sanctions imposed against the Corporation by a court relating to securities legislation or by a securities regulatory authority during legal proceedings material to the Corporation to which the Corporation is a party or of which any of its property is the subject matter, and there are no such proceedings known to the Corporation to be contemplated during the financial year ended December 31, 2011.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed herein, none of the directors, executive officers or principal shareholders of the Corporation and no known associate or affiliate of any of them, has or had any material interest, direct or indirect, in any transaction within the three years prior to the date of this Annual Information Form or in any proposed transaction, that has materially affected or will materially affect the Corporation.

TRANSFER AGENT AND REGISTRAR

The transfer agent and registrar for the Corporation's Common Shares is Computershare Trust Company of Canada at its principal offices in Calgary, Alberta, and Toronto, Ontario.

MATERIAL CONTRACTS

The Corporation is not a party to any material contract, other than contracts entered into in the ordinary course of business as at December 31, 2011.

INTERESTS OF EXPERTS

KPMG LLP has prepared the auditor's report on the consolidated financial statements of the Corporation for the year ended December 31, 2011. KPMG LLP is independent in accordance with the rules of professional conduct of the Institute of Chartered Accountants of Alberta.

ADDITIONAL INFORMATION

Additional information, including directors' and officers' remuneration, principal holders of the Corporation's securities and securities authorized for issue under equity compensation plans, is contained in the Corporation's most recent Information Circular. Additional financial information is provided in the Corporation's Consolidated Financial Statements and Management's Discussion and Analysis for the year ended December 31, 2011.
